Notes on Evaluation of Academic Achievement

Grades for assessments are given on a scale of 1 to 6. The highest grade is 6, the lowest 1. Grades awarded in half-grade increments are the norm; quarter-grade increments are possible. An assessment receiving a grade of 4 or higher is deemed passed. Ungraded assessments are marked on a «Pass»/«Fail» basis, «Fulfilled»/«Not Fulfilled», «Attended» or with a w (Module in Progress). ECTS credits are awarded if an assessment is marked Pass or given a grade of 4 or higher. Credits can only be awarded for an entire module; partial credit is not given.

If the status is «Successful», the module has been passed and ECTS credits have been awarded. «Not Successful» means either that the module was not passed but the assessment may be repeated, or that the module was definitively failed and no ECTS credits were awarded. Module in progress signifies that a module lasts two semesters and that only the first semester was completed at the time the Transcript of Records was issued.

Letter of Recommendation

To Whom it May Concern,

I am very happy to write a letter of recommendation for Cesare Villiger.

Cesare has just finished one of my advanced master's courses in modern statistical inference, with emphasis on applications in financial econometrics. The course is rather high level, being aimed at the students enrolled in Zurich's highly competitive quant finance masters program. We begin already in the first lecture with characteristic functions and the inversion theorem, and also cover the functionality and examples using the Fast Fourier Transform, and how these are used in quantitative risk management for computing risk measures of financial portfolios. Other topics I cover include resampling algorithms (bootstrap), saddlepoint approximations (as used for example in option pricing), numerical optimization, the EM algorithm for estimating the parameters of mixture distributions (these being very common in the modeling of asset returns, and more generally in machine learning contexts), as well as more advanced univariate and multivariate distributions that are used in empirical finance such as the stable Paretian.

The workload for students is rather high, with grading based on three lengthy take home assignments requiring handing in a professional looking report written in LaTeX that entails working through the mathematical and statistical theory, and then extensive computer coding in one of the prototyping languages, e.g., R, Python, or Matlab.

Cesare received the highest possible grade in my class. His written assignments are outstanding, having amounted to nearly 100 pages of analysis. He is clearly able to write professional reports, notably those requiring the use of advanced statistical methodology. What impressed me further is that, on the last (and most challenging) assignment, for which I gave the students three weeks to work on, Cesare not only finished it in three days (!!), but also worked through the theory and developed codes to implement a recent advanced algorithm from the optimization literature for estimating a multivariate statistical model. I am going to use his codes in my own research.

So, as should be clear, this is a student with an extremely high skill set, and who also can clearly work under pressure and deliver. This guy has what it takes to be an important member of a high powered research team in quant finance. Arguably equally important, Cesare is a very pleasant, modest person with strong social skills. As such, I give him my highest recommendation, and suggest you take a candidate like this very seriously.

If you have any questions or wish to speak with me about Cesare, please contact me via email.

Sincerely,

Prof. Marc Paolella
